

Collections Review Desk

A second pair of eyes for the bank's collection calls

When a customer misses a loan payment, an agent calls and writes a case note.
Our tool checks whether the note matches what the customer actually said.

THE AGENT WRITES

"Customer promised to pay Rs. 18,500 by Friday."

THE CUSTOMER ACTUALLY SAYS

"I disagree with the amount. Explain the charges first. I cannot promise payment yet."

The tool flags the mismatch and shows the exact words from the call.

It also checks payment requests against the bank's approved address list.

-
- 1 AI turns the call into text and compares it with the note and bank rules.
 - 2 A supervisor replays the call, checks the evidence and decides what to do.
 - 3 The app saves the decision, reason and follow-up.
